

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method for distributing content over a communications network, comprising:
 - logging on to a server by a web-enabled device;
 - generating a list of accessible content available at ~~[[a]] the server, the content having been provided by a first party;~~
 - providing the list to the web-enabled device ~~associated with the first party;~~
 - ~~receiving, at the device, a selection of accessible content from the list;~~
 - selecting a particular accessible content from the list of accessible content at the web-enabled device;
 - transmitting the selection to the server;
 - retrieving the selected content from a storage associated with the server;
 - sending information to the server by the web-enabled device as to one or more designated devices not including the web-enabled device which are selected by the web-enabled device to receive the selected content;
 - electronically transmitting from the server the ~~retrieved~~ selected accessible content to a the one or more designated devices.
2. (Currently Amended) The method according to claim 1, further comprising receiving a request for content distribution from the web-enabled device, prior to generating the list.
3. (Currently Amended) The method according to claim 1, further comprising authenticating the web-enabled device, prior to generating the list.
4. (Currently Amended) The method according to claim 3, further comprising receiving login information at the web-enabled device, and transmitting the login information to the server, wherein authenticating the web-enabled device comprises authenticating the login information.

5. (Currently Amended) The method according to claim 1, further comprising receiving a phone number, fax number, or address for the one or more designated device at the server from the web-enabled device, prior to electronically transmitting the selected accessible content.
6. (Currently Amended) The method according to claim 5, wherein electronically transmitting the content to the one or more designated device comprises electronically transmitting the selected accessible content to the received phone number or address.
7. (Currently Amended) The method according to claim 1, wherein the web-enabled device comprises a browser, further comprising receiving and displaying the list on the browser of the web-enabled device.
8. (original) The method according to claim 1, wherein electronically transmitting comprises faxing.
9. (original) The method according to claim 1, wherein electronically transmitting comprises instant messaging.
10. (original) The method according to claim 1, wherein electronically transmitting comprises fax over IP.
11. (Currently Amended) The method according to claim 1, wherein electronically transmitting comprises sending the ~~retrieved~~ selected accessible content to a fax service provider, the fax service provider electronically sending the ~~retrieved~~ selected accessible content to the one or more designated devices.
12. (Currently Amended) The method according to claim 1, further comprising providing the web-enabled device so that it is publicly accessible.

13. (Currently Amended) A method for initiating the electronic distribution of content over a communications network, comprising:

~~providing login information to a device;~~
transmitting ~~the~~ login information to a server;
authenticating the login information at the server;
generating a list of accessible content available at the server, the content having been provided by a first party associated with ~~the~~ a device;
providing the list to the device;
receiving, at the device, a selection of accessible content from the list;
transmitting the selection to the server; ~~and~~
retrieving the selected accessible content from storage associated with the server;
sending address/location information associated to a designated device to the server from the device, the designated device being different from the device; and
sending the selected accessible content to the designated device using the address/location information.

14. (original) The method according to claim 13, further comprising receiving a request for content distribution from the device, prior to generating the list.

15. (Currently Amended) The method according to claim 13, wherein sending address/location information associated with a designated device ~~wherein further comprising receiving~~ comprises sending a destination phone number, fax number, or address ~~at~~ to the server.

16. (original) The method according to claim 13, wherein the device comprises a browser, further comprising receiving and displaying the list on the browser of the device.

17. (original) The method according to claim 13, further comprising providing the device so that it is publicly accessible.

18. (Currently Amended) A system for distributing content to a designated device, comprising:

a web-enabled device that is different from the designated device and that can receive and provide a listing of content;

a server with an associated storage device, the storage device maintaining content that had been previously provided by a first party associated with the web-enabled device to the storage, the server generating the listing of content to the web-enabled device, providing the listing to the web-enabled device, receiving a selection of content from the web-enabled device, retrieving the selected content, and electronically transmitting the selected content to the designated device selected by the web-enabled device; and

a communications network between the device and the server.

19. (Currently Amended) The system according to claim 18, wherein the web-enabled device sends a request for content distribution to the server to activate the server generating the listing of content.

20. (Currently Amended) The system according to claim 18, further comprising an authentication system for authenticating the web-enabled device.

21. (Currently Amended) The system according to claim 18, wherein the web-enabled device is adapted to receive login information and provide the login information to the server for authentication.

22. (original) The system according to claim 18, wherein the server transmits the content to a phone number, fax number, or address associated with the designated device.

23. (Currently Amended) The system according to claim 18, wherein the web-enabled device ~~comprises~~ includes a browser that displays the listing.

24. (original) The system according to claim 18, further comprising a fax service provider for electronically transmitting the selected content to the designated device.

25. (Currently Amended) The system according to claim 18, wherein the web-enabled device is publicly accessible.

26. (original) The system according to claim 18, wherein the communications network is the internet.

27. (original) The system according to claim 18, wherein the communications network is a LAN or WAN.

28. (original) The system according to claim 18, wherein the content comprises at least one of documents, pictures, and data.
